

Windows

WINDOWS

Rainier Windows are a proprietary, semi-rigid and crystal clear window system for yachts and architectural enclosures of all sizes. Formerly Barrett Bonded Windows, these windows are unsurpassed in clarity, durability, sophisticated design and safety. The difference in visibility between a Rainier Window and regular soft vinyl windows is remarkable.

Rainier Industries is in the business of creating the best fabric and shelter products and solutions. Our roots go back to 1896, when we delivered tents and canvas products to miners headed for the Alaska Klondike Gold Rush. Since then we have grown, but we have never changed our commitment to providing the highest quality and most durable products available with outstanding customer satisfaction.

Rainier Windows also provide outstanding visibility in architectural enclosures. The balcony enclosure shown, fabricated by Custom Canvas of Charleston, features sliding Rainier Windows and an unencumbered view.

TESTIMONIALS

"Your windows are so far superior to regular marine vinyl! The clarity is amazing! I'm putting Rainier Windows on all my boats from now on."

Dennis Lubbert
Sea Ray 550 Boat Owner
Milwaukee, Wisconsin

"The design and development of these windows came from many years of working with boat owners in the Northwest and Canada who wanted clear windows that would last. Rainier has taken this patented design to the next level and now produces world class windows for some of the finest boats across the country."

John Barrett
Rainier Bonded Window Creator
Barrett Enclosures Inc.
Seattle, Washington

RAINIER WINDOWS... CLEARLY BETTER

When you choose Rainier Windows, you are choosing the best semi-rigid windows available for fabric enclosures. Tested under the harshest marine conditions, constantly improved and enhanced for over a decade, these windows are ideal for all types of enclosures on yachts of all shapes and sizes, as well as for architectural use.

CLARITY. Glass-like qualities of Rainier Windows offer incredible visibility while resisting hazing, scratching, and yellowing. All Rainier Windows carry a 5-year limited warranty against loss of clarity.

SAFETY. Our top-of-the-line Rainier Diamond Windows are certified safe by the National Transportation Board for transportation applications. These polycarbonate windows are virtually shatterproof, with 250 times the impact strength of glass and 30 times that of acrylic. Our Rainier Crystal Windows line is also extremely safe. We developed a specially modified acrylic for these windows that is over 10 times more break resistant than regular acrylic.

SOPHISTICATED DESIGN. The stitchless double fabric construction on all Rainier Windows enhances the look of your enclosure while giving you lasting durability and style. Rainier Windows can be fabricated to enhance the unique style of your yacht or building.

DURABILITY. Rainier Windows have been developed and tested for the extreme marine environment, lasting longer and staying much clearer than normal soft vinyl.

LIGHT-WEIGHT. Weighing in at less than half the weight of glass, even large windows can be used easily in most areas to give you seamless panoramic views. Rainier Windows can be opened easily using hinges or our sliding track systems.

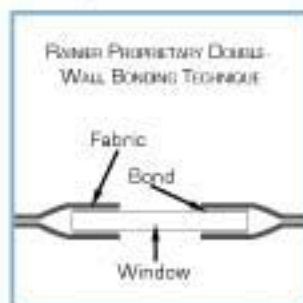

FLEXIBLE YET RIGID. Rainier Windows can bend, yet retain their memory to return to the original flat shape. Enclosures can be sophisticated in design, but stored flat when not in use.

UV PROTECTION. Rainier Windows screen 98-100% of the sun's harmful UV rays, protecting you, valuable instrumentation and interiors.

Island Packet 40

While the initial cost of Rainier Windows is greater than inexpensive soft vinyl, the life-time value of the Windows far exceeds that of other products. Each Rainier Window is custom made to your exact design. You choose the window material, fabric and the complexity of the design.

The proprietary Rainier Windows manufacturing process creates a completely water-tight, more attractive stitchless bond, inside and out.

Rainier Windows are custom installed into one piece of fabric on each side, allowing windows of any shape and a smooth, seamless interior and exterior appearance.

Semi-rigid Rainier Windows can be hinged easily to open the window when you want exterior access or a fresh breeze.

A special track system for sliding doors and windows is another design option for flexibility with Rainier Windows.
